EDUCATION

M.S., Computer Science, AI and Data Science (in progress), Florida Gulf Coast University Expected May 2028
B.S., Software Engineering, Minor in Mathematics, Florida Gulf Coast University May 2026

ACHIEVEMENTS

- **EagleHacks 2026:** 1st Place, EightPoint Challenge, and 3rd Place Overall for Ace.ai, an LLM-powered mock interview platform.
- **IEEE Publication:** Co-author, conference-nominated paper on autonomous trailer-truck parking using sensor fusion and motion planning.

EXPERIENCE

Graduate Research Assistant, FGCU Dendritic Institute Mar 2026 to Present
Human-Centered AI and Data Science Lab, PI Dr. Leandro de Castro Fort Myers, FL

- Build a Python data pipeline for PRISM, an FGCU and UMass Lowell plastic waste forecasting project; own exploratory data analysis, preprocessing, and reproducible transformations under Git.
- Develop machine learning models (Random Forest, gradient-boosted trees, SVR) in scikit-learn with time-series cross-validation, conformal prediction for uncertainty quantification, and anomaly detection on time-series data.
- Design AI Academy course content on AI ethics and prompt engineering for non-technical community learners.

Software Engineer Intern, Exonicus Aug 2025 to May 2026
VR clinical trauma training platform (Senior Capstone) Fort Myers, FL

- Developed C# middleware in Unity for a real-time VR trauma training simulation on Meta Quest 3, shipping a user-ready release of the flagship product with a cross-functional team.
- Built simulation modules modeling patient physiology and psychological state, including medication response systems that update vitals dynamically.
- Designed modular, testable architecture bridging backend simulation logic with 3D front-end systems; wrote unit tests to validate patient state machines against engineering requirements.
- Resolved runtime defects on VR hardware through debugging and root-cause analysis; worked in Agile sprints with standups, code review, and Git.

Undergraduate Research Assistant, FGCU Department of Mathematics Jan 2026 to Apr 2026
PI Dr. Cara Brooks Fort Myers, FL

- Ran numerical experiments in MATLAB and Maple on spectral radius behavior of parameter-dependent companion matrices for noisy-data regularization; presented at EagleX 2026.

PROJECTS

Ace.ai | Python, LLM APIs, Web | [GitHub](#) 2026

- Built and deployed an LLM-powered mock interview platform for behavioral and technical interviews in one hackathon sprint; owned architecture, integration, testing, and the live demo.

Autonomous Trailer-Truck Parking | Research and Documentation Lead, 7-person team 2026

- Wrote the implementation and research sections for a sensor fusion and motion planning system; produced architecture diagrams and technical documentation.

Credit Card Fraud Detection Database | SQL, Relational Design 2025

- Designed a normalized relational database for financial transaction data with referential integrity constraints and optimized SQL queries for fraud pattern analysis.

DateSpark | Node.js, Express, REST APIs

- Built a full-stack date night planning app integrating the Google Places and Yelp APIs.

LEADERSHIP

Secretary, Deep Tech Club at FGCU (building two single-stage rockets) 2026 to Present

TECHNICAL SKILLS

Languages: Python, C#, SQL, JavaScript, Java, C++, C, MATLAB, LaTeX, HTML, CSS

Frameworks and Libraries: Unity, .NET, React, Node.js, Express, scikit-learn, pandas, NumPy, SciPy, MAPIE

Tools and Platforms: Git, GitHub, AWS, Docker, Jira, Linux, Windows, VS Code, AI-assisted development tools

Practices: Agile/Scrum, SDLC, unit testing, debugging, root-cause analysis, requirements analysis, technical documentation
